

AI Usage Reporting Model Documentation

Data Dictionary and Power BI Model Reference

Executive Summary

This Power BI model tracks AI adoption, Copilot usage, GitHub Copilot activity, coding productivity metrics, employee participation, and feature utilization across the organization. The model combines employee data from Workday with AI usage to measure adoption rates, engagement, code generation, code acceptance, IDE usage, and feature-level interactions.

Primary reporting periods documented here:

- AI Metrics: 05/14/2026 - 06/10/2026
- New AI Data: 06/10/2026 - 07/07/2026

Model Inventory

Source Table	Purpose
AI Metrics	Primary AI adoption dataset used to measure chat, agent, client, user interaction, and code activity across employees.
GitHubEnterpriseDailyUsage	Tracks GitHub Copilot enterprise-wide development activity and code generation behavior.
GitHubEnterpriseDailyUsageByFeature	Breaks GitHub Copilot usage down by feature.
GitHubEnterpriseDailyUsageByIde	Measures GitHub Copilot usage by development environment.
GitHubEnterpriseDailyUsageByLanguageFeature	Tracks AI adoption by programming language and feature.
GitHubEnterpriseDailyUsageByLanguageModel	Tracks AI usage by programming language and model.
GitHubEnterpriseDailyUsageByModelFeature	Analyzes feature utilization by AI model.
New AI Data	Second-generation AI telemetry dataset containing chat, agent, CLI, IDE, model, phase, feature, token, and interaction metrics.

Generated Table	Purpose
Client Usage Bucket	Classifies users based on whether they used the client.
Code Threshold	Generated threshold table used for code generation distribution analysis.
Date Table	Standalone date table for reporting periods.
Dim Employee	Employee hierarchy and active employee dimension used for adoption reporting.
Totals By Feature	Aggregates AI metrics by feature for the 05/14/2026 to 06/10/2026 period.
Totals By IDE	Aggregates AI metrics by IDE, version, and plugin.
Totals By Language Feature	Aggregates AI activity by language and feature.
Totals By Language Model	Aggregates AI activity by language and model.
Totals By Model Feature	Aggregates AI activity by model-specific features.
User IDE Summary	Classifies users by IDE adoption pattern.
User Usage Summary	Classifies users by chat and agent adoption behavior.
Work Day	Employee master table used to calculate active employee counts, adoption rates, hierarchy fields, and workforce filters.

Source Tables

AI Metrics

Purpose: Primary AI adoption dataset used to measure chat, agent, client, user interaction, and code activity across employees.

Reporting period: 2026/05/14 - 2026/06/10

Columns

Column	Description
Day	Calendar day.
Enterprise ID	Enterprise identifier.
Login Base	User login with the _RCS suffix removed.
Organization ID	Organization identifier.
Report End Day	End of the reporting period.
Used Agent	True or false flag showing whether the user used an agent.
Used Chat	True or false flag showing whether the user used chat.
Used Cli	True or false flag showing whether the user used the client.
Used Copilot Cloud Agent	True or false flag for Copilot cloud agent usage.
Used Copilot Coding Agent	True or false flag for Copilot coding agent usage.
User ID	Numeric user identifier.
User Login	User login formatted like xyz_RCS.
User Day Key	User ID and formatted date key.

Measures

Measure	Description
Active AI Users	Distinct count of User ID where Used Chat is true.
Active Employee Count	Distinct count of Workday FullName where Is Active Employee is yes.
AI Adoption %	Total chat users divided by total employees.
AI Rows Matched	Count rows in AI Metrics.
Chat Rows	Count rows in AI Metrics where Used Chat is true.
Code Acceptance Activity Count	Total lines of AI-generated code accepted by users.
Code Generation Activity Count	Total lines of code generated by AI.
Distinct Users	Distinct count of User ID.
Employee Adoption Rate	Active AI Users divided by Workday ID.
LOC Added Sum	Lines of code added by AI and accepted by users.
LOC Deleted Sum	Lines of code AI suggested to delete and users accepted.
LOC Suggested To Add Sum	Lines of code AI suggested adding.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting.
Non-Chat Users	User IDs where Used Chat is false.
Non-Client Users	User IDs where Used Cli is false.

Total Agent Users	Distinct count of User ID where Used Agent is true.
Total Chat Users	Distinct count of User ID where Used Chat is true.
Total Code Generated	Sum of code generation activity count.
Total Users	Distinct count of User Login.
Used Client User	User Login where Used Cli is true.
User Initiated Interaction Count	Number of times a user interacted with an agent.

GitHubEnterpriseDailyUsage

Purpose: Tracks GitHub Copilot enterprise-wide development activity and code generation behavior.

Reporting period: YTD usage metrics where available

Columns

Column	Description
EnterpriseID	Enterprise identifier.
LoadedAtUtc	Date and time when the data was loaded.
Usage Date	Date hierarchy for usage activity.
Date Hierarchy	Year, quarter, month, and day.
Pull Requests Total Created	Count of pull requests created by user.
Pull Requests Total Created By Copilot	Count of pull requests created by Copilot. Noted as 0 for all as of 07/20.
Pull Requests Total Reviewed	Count of pull requests reviewed by user.
Pull Requests Total Reviewed By Copilot	Count of pull requests reviewed by Copilot. Noted as 0 for all as of 07/20.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by users from AI using GitHub Enterprise.
CodeGenerationActivityCount	YTD measure of code generated by users from AI using GitHub Enterprise.
DailyActiveUsers	YTD count of users using GitHub Enterprise.
LOC Added Sum	Lines of code added by AI and accepted for GitHub Enterprise.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted for GitHub Enterprise.
LOC Suggested To Add Sum	Lines of code AI suggested adding for GitHub Enterprise.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting for GitHub Enterprise.
UserInitiatedInteractionCount	How many users interacted with GitHub Enterprise.

GitHubEnterpriseDailyUsageByFeature

Purpose: Breaks GitHub Copilot usage down by feature.

Reporting period: YTD usage metrics where available

Columns

Column	Description
ID	Identifier.
Feature	List of features.
Usage Date	Date and time when a feature was used.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using any feature.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using any feature.
LOC Added Sum	Lines of code added by AI and accepted for any feature.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted for any feature.
LOC Suggested To Add Sum	Lines of code AI suggested adding for any feature.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting for any feature.
UserInitiatedInteractionCount	How many users interacted with any feature.

GitHubEnterpriseDailyUsageByIde

Purpose: Measures GitHub Copilot usage by development environment.

Reporting period: YTD usage metrics where available

Columns

Column	Description
ID	Identifier.
IDE	Either vscode or visualstudio.
Usage Date	Date and time when an IDE was used.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using IDE.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using IDE.
LOC Added Sum	Lines of code added by AI and accepted for IDE.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted for IDE.
LOC Suggested To Add Sum	Lines of code AI suggested adding for IDE.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting for IDE.
UserInitiatedInteractionCount	How many users interacted with IDE AI.

GitHubEnterpriseDailyUsageByLanguageFeature

Purpose: Tracks AI adoption by programming language and feature.

Reporting period: YTD usage metrics where available

Columns

Column	Description
ID	Identifier.
Feature	List of features.
Language	List of programming languages.
Usage Date	Date and time when a language feature was used.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using any language feature.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using any language feature.
LOC Added Sum	Lines of code added by AI and accepted for any language feature.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted for any language feature.
LOC Suggested To Add Sum	Lines of code AI suggested adding for any language feature.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting for any language feature.
UserInitiatedInteractionCount	How many users interacted with any language feature.

GitHubEnterpriseDailyUsageByLanguageModel

Purpose: Tracks AI usage by programming language and model.

Reporting period: YTD usage metrics where available

Columns

Column	Description
ID	Identifier.
Language	List of programming languages.
Model	List of AI models.
Usage Date	Date and time when a language model was used.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using any language model.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using any language model.
LOC Added Sum	Lines of code added by language model.
LOC Deleted Sum	Lines of code deleted by language model.
LOC Suggested To Add Sum	Lines of code suggested to add by language model.
LOC Suggested To Delete Sum	Lines of code suggested to delete by language model.

GitHubEnterpriseDailyUsageByModelFeature

Purpose: Analyzes feature utilization by AI model.

Reporting period: YTD usage metrics where available

Columns

Column	Description
ID	Identifier.
Feature	List of features.
Model	List of AI models.
Usage Date	Date and time when a model feature was used.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using any model feature.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using any model feature.
LOC Added Sum	Lines of code added by AI and accepted for any model feature.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted for any model feature.
LOC Suggested To Add Sum	Lines of code AI suggested adding for any model feature.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting for any model feature.

New AI Data

Purpose: Second-generation AI telemetry dataset containing chat, agent, CLI, IDE, model, phase, feature, token, and interaction metrics.

Reporting period: 2026/06/10 - 2026/07/07

Columns

Column	Description
AI Adoption Phase	AI adoption phase structured as Phase X.
AI Adoption Phase Number	AI phase number.
AI Adoption Phase Version	AI adoption phase structured as vX.
Day	Year, quarter, month, and day hierarchy covering every day of 2026.
Enterprise ID	Numeric enterprise identifier.
Login Base	User login without the _RCS suffix.
Report Start Day	When metrics started being tracked.
Report End Day	When metrics stopped being tracked.
Usage Type	Used Both, Chat Only, or Agent Only based on Used Chat and Used Agent flags.
Used Agent	True if the user used an agent.
Used Chat	True if the user used chat.
Used Cli	True if the user used the client.

Used Copilot Cloud Agent	True if the user used an agent.
Used Copilot Coding Agent	True if the user used an agent.
User ID	Numeric user identifier.
User Login	User login structured as XYZ_RCS.
Totals By CLI Fields	Client version, sampled date, prompt count, request count, session count, and token usage fields.
Totals By Feature Fields	Feature metrics including code activity, LOC fields, and interaction count.
Totals By IDE Fields	IDE, version, plugin, code activity, LOC fields, and interaction count.
Totals By Language Feature Fields	Feature, language, code activity, LOC fields, and interaction count.
Totals By Language Model Fields	Language, model, code activity, LOC fields, and interaction count.
Totals By Model Feature Fields	Feature, model, code activity, LOC fields, and interaction count.

Measures

Measure	Description
AI Users New AI	Distinct count where Used Chat and Used Agent are true.
New AI Adoption %	Users Using Agent divided by total employees.
Users Using Agent	Count rows where Used Agent is true.
Users Using Chat	Count rows where Used Chat is true.
User Initiated Interaction Count	Count of times a user interacted with AI.
Code Acceptance Activity Count	Code generated by AI that users accepted.
Code Generated Activity Count	Code generated by AI.
LOC Added Sum	Lines of code added by AI that users accepted.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted.
LOC Suggested To Add Sum	Lines of code AI suggested adding.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting.

Generated Tables

Client Usage Bucket

Purpose: Classifies users based on whether they used the client.

Columns

Column	Description
Client Usage Count	Sets used client users as Used Client and non-client users as Did Not Use Client.
Client Usage Status	Text label for did or did not use client.

Measures

None listed.

Code Threshold

Purpose: Generated threshold table used for code generation distribution analysis.

Columns

Column	Description
Code Threshold	Generated series from 0 to 2500 by 50.

Measures

Measure	Description
Code Threshold Value	Generated series from 0 to 2500 by 50 as a measurement.
Show Day	Returns 1 if Total Code Generated is greater than or equal to Code Threshold Value, otherwise 0.
Total Code Generated CT	Sum of Code Generation Activity Count.

Date Table

Purpose: Standalone date table for reporting periods.

Columns

Column	Description
Date	Standalone table with dates from 05/14 to 06/10.

Measures

None listed.

Dim Employee

Purpose: Employee hierarchy and active employee dimension used for adoption reporting.

Columns

Column	Description
Is Active Employee	Yes or No for active employee status.

Level X Name	Hierarchy by supervisor with 7 reporting levels.
Workday Email Base	Email address without @resurgent.com.

Measures

None listed.

Totals By Feature

Purpose: Aggregates AI metrics by feature for the 05/14/2026 to 06/10/2026 period.

Columns

Column	Description
Day	Date between 05/14/2026 and 06/10/2026, structured YYYY-MM-DD.
Feature	Feature used, such as chat inline, Copilot client, or chat panel.
User ID	Numeric user identifier.
User Day Key	Numeric user ID and date structured YYYY-MM-DD.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using feature.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using feature.
LOC Added Sum	Lines of code added by AI that users accepted.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted.
LOC Suggested To Add Sum	Lines of code AI suggested adding.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting.
UserInitiatedInteractionCount	How many users interacted with a feature.

Totals By IDE

Purpose: Aggregates AI metrics by IDE, version, and plugin.

Columns

Column	Description
Day	Date between 05/14/2026 and 06/10/2026.
IDE	IDE used, either vscode or visualstudio.
IDE Version	Last known sampled IDE version, example 1.120.0.
IDE Version Sampled At	Date and time the IDE version was sampled.
Plugin	Type of plugin, example copilot-chat or copilot-vs.
Plugin Version	Last known version of plugin.
Plugin Version Sampled At	Date and time the plugin version was sampled.
User ID	Numeric user identifier.
User Day Key	Numeric user ID and date structured YYYY-MM-DD.

Measures

Measure	Description
CodeAcceptanceActivityCount	Code generated by AI accepted by user for IDE.
CodeGenerationActivityCount	Code generated by IDE AI.
LOC Added Sum	Lines of code added by AI that users accepted for IDE.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted for IDE.
LOC Suggested To Add Sum	Lines of code AI suggested adding for IDE.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting for IDE.
UserInitiatedInteractionCount	Amount of times users interacted with IDE AI.

Totals By Language Feature

Purpose: Aggregates AI activity by language and feature.

Columns

Column	Description
Day	Date between 05/14/2026 and 06/10/2026, structured YYYY-MM-DD.
Feature	Feature used.
Language	Coding language used for feature.
User ID	Numeric user identifier.
User Day Key	Numeric user ID and date structured YYYY-MM-DD.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using feature.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using feature.
LOC Added Sum	Lines of code added by AI that users accepted.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted.
LOC Suggested To Add Sum	Lines of code AI suggested adding.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting.
UserInitiatedInteractionCount	How many users interacted with a feature.

Totals By Language Model

Purpose: Aggregates AI activity by language and model.

Columns

Column	Description
Day	Date between 05/14/2026 and 06/10/2026, structured YYYY-MM-DD.
Language	Coding language used for feature.

Model	AI model used.
User ID	Numeric user identifier.
User Day Key	Numeric user ID and date structured YYYY-MM-DD.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using model.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using model.
LOC Added Sum	Lines of code added by AI that users accepted.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted.
LOC Suggested To Add Sum	Lines of code AI suggested adding.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting.
UserInitiatedInteractionCount	How many users interacted with a feature.

Totals By Model Feature

Purpose: Aggregates AI activity by model-specific features.

Columns

Column	Description
Day	Date between 05/14/2026 and 06/10/2026, structured YYYY-MM-DD.
Feature	Feature used, example chat_panel_agent_mode.
Model	AI model used.
User ID	Numeric user identifier.
User Day Key	Numeric user ID and date structured YYYY-MM-DD.

Measures

Measure	Description
CodeAcceptanceActivityCount	YTD measure of code accepted by user from AI using model.
CodeGenerationActivityCount	YTD measure of code generated by user from AI using model.
LOC Added Sum	Lines of code added by AI that users accepted.
LOC Deleted Sum	Lines of code AI suggested deleting and users accepted.
LOC Suggested To Add Sum	Lines of code AI suggested adding.
LOC Suggested To Delete Sum	Lines of code AI suggested deleting.
UserInitiatedInteractionCount	How many users interacted with a feature.

User IDE Summary

Purpose: Classifies users by IDE adoption pattern.

Columns

Column	Description
IDE Usage Type	Has VS Code and Visual Studio, VS Code only, Visual Studio only.
User ID	Numeric user identifier.

Measures

Measure	Description
Has Visual Studio	Counts rows in Totals By IDE where IDE is visualstudio.
Has VS Code	Counts rows in Totals By IDE where IDE is vscode.
User Count	Counts rows in User IDE Summary.

User Usage Summary

Purpose: Classifies users by chat and agent adoption behavior.

Columns

Column	Description
Agent Usage Label	Used Agent or Did Not Use Agent.
Chat Usage Label	Used Chat or Did Not Use Chat.
Clean User Login	User login without _RCS.
Usage Type	Used Both, Chat Only, or Agent Only based on Used Chat and Used Agent flags.
Used Agent	Yes if Used Agent is true, else No.
Used Chat	Yes if Used Chat is true, else No.
User Login	User login formatted like sbrooks_RCS.

Measures

Measure	Description
Total Users	Distinct count of clean user login.

Work Day

Purpose: Employee master table used to calculate active employee counts, adoption rates, hierarchy fields, and workforce filters.

Columns

Column	Description
Workday ID	Numeric employee ID.
First Name	Employee first name.
Last Name	Employee last name.
Full Name	Employee full name.
Preferred Name	Preferred employee name, if available.
Email Address	User ID with @resurgent.com.

Email Base	Resurgent email without @resurgent.com.
Employee Type	Full time, part time, or contractor.
Hire Date	Structured M/DD/YYYY with time.
Termination Date	M-DD-YYYY with time if employee terminated.
Termination Flag	1 if terminated, 0 if not.
Status	Either T or A.
Home Department	Numeric home department.
Home Department Description	Department name, example Legal.
Job Title Description	Job title, example Document Specialist I.
Location	Employee location.
Location Code	GVL or CINS.
Company Code	MHC.
Manager	Supervisor ID full name.
Supervisor Workday ID	Numeric employee ID if supervisor.
Is Supervisor	True or false depending on whether employee ID is listed as supervisor ID.
Clean Supervisor	Numeric supervisor ID.
Path	Structured setup for employee hierarchy.
Level X Name	Employee hierarchy path using employee full name.
Leave Of Absence Flag	1 if on leave, 0 if not.
Is Active Employee	If termination flag is 1 then No, if 0 then Yes.

Measures

Measure	Description
Active Employees	Distinct count of email address where termination flag is 1.
AI Adoption Percent	Distinct count login base divided by distinct count email address.
AI Adoption Metric	AI Users divided by active employees.
AI Adoption %Percent	AI Users divided by Active Employee.
AI Users	Distinct login base where Used Agent and Used Chat are true.
Artificial Intelligence Users	Counts distinct number of users that have used AI.
Duplicate Check	Distinct count of Workday ID.
Total Employees	Distinct count of Email Base.
